Heavy-Duty Cranes
DEMAND
a High-Tech
SOLUTION

SAFETY AND CONTROL IN THE PALM OF YOUR HAND.

The revolutionary Venturo Logic Control (VLC™) makes operating your fully-hydraulic crane safer and more precise. You get more control throughout the entire load operation, with important safety alerts and displays showing vehicle stability and grade indications, as well as precision overload protection. Available with wireless or controller area network (CAN) communication, the comfortable pistol-grip controller provides relief from fatigue, and a 60-hour battery life means you'll never have to worry about getting the job done.

SAFETY.

Precision overload protection increases operator protection by preventing overload or stability issues from occurring on the crane with four different safety alerts.

CONTROL.

State-of-the-art radio remote controller puts complete crane control in the palm of the operator's hand with real-time load and status details.

RELIABILITY.

Eliminate lag time between the controller and the crane to improve responsiveness and provide reliable load and status updates.
